Mark schemes

| 1. | (a) | uniform acceleration | | |
|----|-----|---|---|-----|
| •• | | allow constant / steady acceleration | | |
| | | allow velocity / speed increasing at a constant rate | | |
| | | ignore reference to direction acceleration scores 1 mark | | |
| | | or | | |
| | | velocity / speed is increasing scores 1 mark | | |
| | | do not accept acceleration increases | | |
| | | | 2 | |
| | (b) | up(wards) | | |
| | | | 1 | |
| | (C) | a group of objects that interact | | |
| | () | | 1 | |
| | (d) | velocity just after bounce is less than just before bounce | | |
| | () | allow velocity is less / decreases | | |
| | | velocity decreases to zero – on its own scores zero | | |
| | | | | |
| | | or | | |
| | | the height at the top of the bounce is less than the height from which it was dropped | | |
| | | | 1 | |
| | | so the ball has lost energy | | |
| | | | 1 | |
| | | correct reference to (loss of) ke or (reduced) gpe | | |
| | | | 1 | |
| | | total energy of ball and Earth / ground is constant | | |
| | | allow 'a system' for ball and Earth | | |
| | | allow energy is conserved | | |
| | | | 1 | |
| | | | | [8] |
| 2. | (a) | wavelength | | |
| 2. | | this answer only | | |
| | | | 1 | |
| | (b) | (extremely) hot and dense | | |
| | | ignore very small | | |
| | | | 1 | |
| | (C) | (directly) proportional | | |
| | | allow a correct description of direct proportionality | | |
| | | ignore positive correlation | - | |
| | | | 1 | |
| | (d) | 6 × 10 ²⁴ | | |

1

| | (e) | the furthest galaxies are moving the fastest | |
|----|-----|---|------|
| | | | 1 |
| | | (this suggests) the universe is expanding (from a very small region) | 1 |
| | (f) | expanding at (an ever) greater rate | |
| | | allow expanding faster | 1 |
| | (g) | any one from: | |
| | | detects false claims | |
| | | allow provides credibility detects inaccurate data | |
| | | allow detects mistakes | |
| | | detects bias | |
| | | allow removes bias verifies new data | |
| | | allow checks validity | |
| | | provides a consensus (of opinion) | |
| | | ignore shows data is accurate ignore proves a theory | |
| | | | 1 |
| | (h) | wavelength (seems to have) decreased | |
| | | | 1 |
| | | frequency (seems to have) increased | |
| | | | 1 |
| | | | [10] |
| 3. | (a) | P-waves are longitudinal and S-waves are transverse | |
| | | | 1 |
| | (b) | 0.4 | |
| | () | | 1 |
| | (C) | wave speed = frequency × wavelength | |
| | | allow $v = f \lambda$ | |
| | | | 1 |

(d) $7200 = 0.4 \times \text{wavelength}$

| | wavelength = $\frac{7200}{0.4}$ | 1 |
|-----|---|---|
| | wavelength = 18 000 (m) | |
| | allow up to full marks for ecf using their answer to part (b) | |
| | a method shown as 7200 × 2.5 = 18 000 scores 0 marks | |
| | an answer 18 000 scores 3 marks | 1 |
| (e) | because S-waves cannot travel through a liquid | 1 |
| | and S-waves do not travel through the (outer) core allow some (seismic) waves cannot travel through a liquid and do not go through the core for 1 mark | 1 |
| (f) | magnetic field around the coil changes or | |
| | the magnetic field (lines) cut by the coil allow the generator effect | 1 |
| (g) | because the magnet changes direction | 1 |
| (h) | stationary | 1 |

1

- (i) any **two** from:
 - stronger magnetic field
 allow stronger magnet
 allow heavier magnet
 bigger magnet is insufficient
 - more turns on the coil
 bigger coil is insufficient
 do **not** accept more coils of wire
 - turns pushed closer together
 - spring with a lower spring constant allow less stiff spring allow weaker spring do not accept add an iron core
- (a) all heights drawn the same as tube 1 *judge by eye*

4.

(b) increasing depth increases the height / mass / volume (of the water column) above the swimmer

allow more water above (the swimmer) more water is insufficient

increasing the weight / force (of water) acting on the swimmer

- (c) increase in depth = 1.2 (m)
 - (Δ) p = 1.2 × 1030 × 9.8 allow either 0.50 **or** 1.70 for 1.2
 - $(\Delta) p = 12112.8$
 - allow a correctly rounded answer allow a correct calculation using either 0.50 **or** 1.70
 - pascals **or** Pa

do **not** accept pa allow N/m²

an answer of 12 112.8 scores 3 marks

2

1

[13]

| (b) accept any practical suggestion that could cause a range of values e.g. misjudging the centre of the ray e.g. not replacing mirror / ray box in the same position measuring the angle incorrectly is insufficient moving the mirror / ray box is insufficient | 1 |
|---|---|
| measuring the angle incorrectly is insufficient | 1 |
| | |
| (c) range = 10 | |
| or mean of 51 calculated | 1 |
| E (0) | 1 |
| 5(°) an answer of 5(°) scores 2 marks | 1 |
| (d) within experimental accuracy the angle of incidence and the angle of reflection are the same | |
| allow the angle of incidence is nearly the same as the angle of reflection | |
| or the angle of reflection is usually different to the angle of incidence | |
| allow only a few of the values are the same / similar allow the idea of a range of values | 1 |
| relevant use of data | 1 |
| e.g. at 20° / 30° / 40° there is at least one measurement of angle of reflection that is exactly the same | |
| or at 50° there are big differences | |
| allow 50° includes anomalous results | |
| an answer in terms of calculated mean(s) may score both marks | |
| e.g. mean calculated for one or more angle of reflection (1) conclusion correctly stating angle i = / ≠ angle r (1) | 1 |
| (e) results could be collected for angles (of incidence) not yet measured | |
| allow a stated angle of incidence e.g. 10° or 60° | |
| changing the mirror is insufficient | |
| ignore repeat the measurements | 1 |

| | (f) | replace the mirror with an irregular reflecting surface | | |
|----|-----|--|---|-----|
| | | allow use an irregular reflecting surface replace mirror with paper is insufficient do not accept use a glass block | | |
| | | | 1 | [8] |
| 6. | (a) | arrow of equal size pointing vertically upwards | | |
| | | judged by eye ignore horizontal arrows if equal and opposite | | |
| | | horizontal arrows of unequal length negates this mark | 1 | |
| | | labelled 'upthrust' | | |
| | | ignore buoyancy ignore 25 kN | 1 | |
| | (b) | weight = 25 kN | | |
| | | allow 24 to 25 kN inclusive | 1 | |
| | | 25 000 = mass × 9.8 | | |
| | | or $m = \frac{25000}{9.8}$ | | |
| | | allow their W correctly converted and substituted | 1 | |
| | | m = 2551 kg | | |
| | | allow correctly calculated value using their converted W allow a value correctly calculated with W in kN | 1 | |
| | | m = 2600 kg | • | |
| | | allow a calculated answer correctly rounded to 2 significant figures | | |
| | | an answer of 2600 scores 4 marks | 1 | |
| | (c) | Newton's 3rd law (of motion) | | |
| | | | 1 | |

| | (d) | vertical force (50 N) drawn and | |
|----|-----|---|-----------|
| | | horizontal force (150 N) drawn to the same scale | 1 |
| | | resultant tension force in the correct direction shown by an arrowhead | 1 |
| | | value of the tension force in the range 156 N−160 N allow a calculated value of 158 | 1 |
| | | value of direction in the range 18°−20° (from the horizontal) allow 70° to 72° (from the vertical) allow a bearing in the range 288 to 290 | |
| | | | 1 [11] |
| 7. | (a) | any one from: too few turns / coils on the secondary allow number of turns / coils on the primary was increased | |
| | | p.d. across the primary was reduced <i>ignore human error</i> | 1 |
| | (b) | the p.d. (across the secondary) goes above 2V allow p.d. across secondary is higher than p.d. across primary after 20 turns | 1 |
| | (c) | it increases (until the nails reach a constant temperature) | 1 |

(d)
$$\frac{640}{4} = \frac{V_p}{1.75}$$

$$V_p = \frac{640 \times 1.75}{4}$$

$$V_p = 280 \text{ (V)}$$

$$280 \times I_p = 336$$

$$allow \text{ their calculated}$$

$$V_p \times I_p = 336$$

$$I$$

$$I_p = 1.2 \text{ (A)}$$

$$allow \text{ an answer that is consistent with their calculated}$$

$$value \text{ of } V_p$$

$$I$$

$$336 = I_s \times 1.75(1)$$

I_s =
$$\frac{336}{1.75}$$
 (1)

 $I_s = 192 (A) (1)$

$$I_p = 192 \times \frac{4}{640}$$
 (1)

allow

$$I_p$$
 = their calculated $I_s \times \frac{4}{640}$

 $I_p = 1.2 (A) (1)$

allow an answer that is consistent with their calculated value of I_s an answer of 1.2 (A) scores **5** marks

[8]

| 8. | (a) | (force of) gravity causes the satellite to accelerate (towards the Earth) allow satellite is (constantly) accelerating | 1 |
|----|-----|--|---|
| | | the acceleration causes a change in direction acceleration causes a change in speed negates this mark point | 1 |
| | | velocity changes because direction changes | 1 |
| | (b) | length of orbit taken from graph = 42 100 (km) | 1 |
| | | 42 100 = 7.73 × time or time = $\frac{42100}{7.73}$ allow their distance = 7.73 × time | |
| | | time (1 orbit) = 5446(s) allow a value consistent with their distance | 1 |
| | | number of orbits = $\left(\frac{24 \times 3600}{5446}\right)$ = 15.86 allow $\left(\frac{24}{1.51}\right)$ = 15.86 allow a value consistent with their distance | |
| | | number of orbits = 15 allow a value consistent with their distance an answer of 16 scores 4 marks | 1 |

| | length of orbit taken from graph = 42 100 (km) (1) | | |
|-----------|--|---|------|
| | $7.73 = \frac{\text{distance}}{24 \times 3600}$ (1) | | |
| | distance = 667 872 (km) (1) | | |
| | number of orbits = $\left(\frac{667872}{42100}\right)$ | | |
| | = 15.86 (1) | | |
| | allow a value consistent with their two distances | | |
| | number of orbits = $15(1)$ | | |
| | allow a value consistent with their two distances | | |
| | up to full marks can be awarded for a method calculating velocity in km/h and time in hours | | |
| | an answer of 15 scores 5 marks | | |
| | | | |
| (c) | the predicted data is very close to the actual data | 1 | |
| (d) | supported the prediction (made by Rede) | _ | |
| (d) | supported the prediction (made by Bode) allow predicted and actual values are very close | | |
| | anow predicted and actual values are very close | 1 | |
| | so provides evidence that the equation is true / correct / works / accurate | | |
| | allow proves for provides evidence | | |
| | | 1 | |
| | | | [11] |
| (a) | it is harder to judge where the centre of a wider ray is | | |
| | | 1 | |
| | causing a larger uncertainty (in the measurements) | | |
| | allow increasing <u>random</u> errors (in the measurements) | 1 | |
| <i></i> . | | 1 | |
| (b) | line of best fit drawn and extrapolated to 80 degrees | 1 | |
| | | • | |
| | 41 (degrees) allow 40 to 43 (degrees) | | |
| | | 1 | |
| | | | |

or

9.

| (C) | steps are identified and logically sequenced. | 5-6 | |
|-----|---|-----|------|
| | Level 2: The design/plan would not necessarily lead to a valid outcome. Most steps are identified, but the method is not fully logically sequenced. | | |
| | | 3-4 | |
| | Level 1 : The design/plan would not lead to a valid outcome. Some relevant steps are identified, but links are not made clear. | 1–2 | |
| | No relevant content | | |
| | | 0 | |
| | Indicative content: | | |
| | place a glass block on a piece of paper | | |
| | draw around the glass block | | |
| | use the ray box to shine a ray of light through the glass block | | |
| | mark the ray of light entering the glass block | | |
| | mark the ray of light emerging from the glass block is the points to show the path of the complete ray through the block | | |
| | join the points to show the path of the complete ray through the block and draw a normal line at 90 degrees to the surface | | |
| | use a protractor to measure the angle of incidence | | |
| | use a protractor to measure the angle of refraction | | |
| | • use a ray box to shine a ray of light at a range of different angles (of incidence) | | |
| | increase the angle of incidence in 10 degree intervals | | |
| | from an angle of incidence of 10 degrees to an angle of incidence of 70 degrees. | | |
| | allow use of optical pins instead of a ray box | | |
| (d) | $\frac{(28+25+22)}{2}=25$ | | |
| (u) | 3 | | |
| | | 1 | |
| | 3 (degrees) | | |
| | allow alternative method | | |
| | 28 - 22 = 6(1) | | |
| | = 3 (degrees) (1) | | |
| | | 1 | |
| (e) | Velocity | | |
| (0) | Volocity | 1 | |
| | | | [13] |
| (a) | at least three circles drawn | | |
| (a) | | 1 | |
| | | · | |
| | clockwise arrows on circles | | |
| | allow 1 mark for one or two circles with clockwise | | |
| | arrows | 1 | |
| | | T | |

(c) Level 3: The design/plan would lead to the production of a valid outcome. All key

10.

- (b) 4×10^{-6}
- (c) the sides of the coil (parallel to the magnet) experience a force (in opposite directions) allow the current creates a magnetic field ignore Fleming's Left Hand Rule

the forces cause moments that act in the same (clockwise / anticlockwise) direction **or**

the moments cause the coil to rotate (clockwise / anticlockwise)

allow the magnetic fields interact to create a pair of forces (acting in opposite directions) **or** allow the magnetic fields interact causing the coil to rotate

(each half-revolution) the two halves of the (rotating) commutator swap from one (carbon) brush to the other

(each half-revolution) the commutator reverses the current (in the coil) **or** keeping the forces in the same direction (keeping the coil rotating)

allow keeps the current in the same direction relative to

the (permanent) magnetic field
